

## **Facility Energy Efficiency Statement**

Design Works (Cumbria) Ltd has implemented energy conservation and efficiency measures in its office space. Office equipment is managed using energy-efficient settings, including Energy Star-rated devices where applicable, automatic sleep modes and after-hours power-down procedures to reduce unnecessary energy use. Lighting efficiency is supported through maximising natural daylight, the use of energy-efficient bulbs and task lighting to minimise overall demand. Heating and cooling efficiency is managed through programmable thermostats, timed controls and passive measures such as shading and insulation appropriate to the building. These measures apply to the primary workspace used by the company and are reviewed annually as part of our environmental performance review. The office's Energy Performance Certificate (EPC) rating is A.
